Study Planner User Guide

This PDF explains how to use the Study Planner application after it is installed or deployed. It is written for students and regular users, not developers.

Use the side navigation inside the app to move between Dashboard, Add Task, Progress, Tasks, Analytics, and Settings.

Getting Started

- Open the Study Planner application from the provided shortcut or application file.
- If you are a new user, choose Register and create an account with your name, username, email, and password.
- If you already have an account, choose Login and enter your username and password.
- After login, the app opens your dashboard. This is the main screen for viewing your study status.

Dashboard

- Use the Dashboard to see today's study overview, upcoming tasks, progress, attendance information, and quick study statistics.
- Check the summary cards to understand what needs attention first.
- Use the navigation menu to move to Add Task, Tasks, Progress, Analytics, or Settings.

Adding Tasks

- Go to Add Task from the side navigation menu.
- Enter the subject, topic, deadline, priority, and other task details requested by the form.
- Save the task after checking that the date and subject are correct.
- Use clear task names so you can recognize them easily later, for example: Complete Algebra Chapter 3.

Viewing and Managing Tasks

- Open Tasks to see your saved study tasks.
- Review task status, deadlines, priorities, and subject details.

- Update a task when your plan changes.
- Mark tasks as completed after finishing them so progress tracking stays accurate.
- Remove only tasks that are no longer needed.

Study Timetable

- Use the timetable section to view study sessions in an organized schedule.
- Follow the planned time blocks to keep study sessions consistent.
- Adjust your tasks or settings if the timetable does not match your available time.

Progress and Attendance

- Open Progress to check completed tasks, remaining work, XP, badges, and study growth.
- Mark attendance when you study so the app can calculate your weekly attendance status.
- If attendance falls below the required level, the weekly holiday option may be locked until your attendance improves.
- Use progress information to decide which subjects need more time.

Analytics and Weakness Review

- Open Analytics to review weak subjects, weak topics, and performance patterns.
- Use the weakness analysis to choose what to revise first.
- Check recommendations regularly, especially before exams or important deadlines.

Settings

- Open Settings to change appearance mode, accent theme, reminders, sound effects, auto-save, default study duration, and font size.
- Use Backup / Export Data to create a copy of your local database.
- Use Reset Settings only when you want to return app preferences to default values.
- Use Reset Progress carefully because it clears study progress for the current user.
- Use the Instructions button to download this PDF whenever you need help using the app.

Good Usage Tips

- Add tasks as soon as you receive assignments or decide study goals.
- Keep deadlines realistic so your schedule remains useful.
- Check the dashboard daily before starting study work.
- Update completed tasks immediately after finishing them.
- Back up your data before resetting settings, resetting progress, or moving to another computer.

Troubleshooting

- If login fails, recheck the username and password you entered.
- If a task does not appear, confirm that it was saved and that you are logged in with the correct account.
- If theme or settings changes do not appear immediately, close and reopen the app.
- If the app cannot save a backup or instructions PDF, choose a folder where you have permission to save files.
